The Global Academy

Learning through research

The Global Academy is an international academy for science, technology and innovation. Students turn questions about the world around them into research projects they can test and explain.

How students work

A team starts with a specific question, weighs the evidence and builds a prototype. Presenting the result gives students a reason to revisit assumptions and explain what their design can and cannot do.

For schools and educators

For programme information and school enquiries, visit the Academy or write to info@tga.org.

Tech Galaxy
AWARDS

Tech Galaxy Awards

The Academy's student competition brings secondary-school and university teams together to investigate an urban challenge, develop a response using technology and defend their reasoning.

What the judges look for

The award recognises the quality of the question, the evidence behind the solution and the team's ability to communicate its work. The format and assessment criteria are published on the competition website.

Certificates and enquiries

Use the certificate reference and the verification address printed on the award. Competition information is available at tga.org/awards/.
